

In-house Laboratory

Our in-house lab gives us the capability to perform a urinalysis and routine blood chemistry, CBC, and electrolyte panel on your pet. Results are quick and accurate - often within 15 minutes allowing our doctors to make a diagnosis on your pet and institute the proper treatment without delay. If additional diagnostics are needed, we use some of the best veterinary laboratories in the country to perform more involved tests. Diagnostic samples are shipped next day to Cornell University, Michigan State University, Idexx, and Antech Veterinary labs.
